Module 4: Communicating opponent analysis to the player during the micro-cycle

4.1 Content programming

During the communication of the opponent analysis in the micro-cycle, there are certain questions that need to be answered:

1. Which contents do we want to communicate?
2. Which type of micro-cycle or weekly structure am I standing in?
3. How do I distribute the contents within the micro-cycle?

1. **Which contents do we want to communicate?**

This has already been developed in modules 1 and 2 (*Individual and Collective Analysis of the Opponent*, respectively) of this course (*Opponent Team Analysis*).

We will simply mention the sections in which these contents are usually grouped. In this way, it will be more practical to distribute them.

- Own analysis video (self-analysis).
  - Individual.
  - Group (based on lines, corridors, specific positions, etc.).
  - Team (based on the last play, several plays, recurring errors/achievements, among others)
- Opponent analysis video
  - Individual (predictable encounters, etc.).
  - Group (group tactical ways of the opponent, etc)

- Team (the opponent's playing system, etc.).

- SPA Video (set piece actions).
  - Individual (Individual and/or opponent's actions).
  - Group (Individual and/or opponent's actions).
  - Team (Individual and/or opponent's actions).

2. **Which type of micro-cycle or weekly structure am I standing in?**

Let us analyze the type of micro-cycle or working week we are standing in. In the following table, we can verify that they will be very different depending on the match day and the number of competitions in which we participate.

Table 1: The following table shows and example of micro-cycles based on match day and number of competitions

Friday	Saturday	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Monday
Match	9 days micro-cycle									Match
	Match	8 days micro-cycle								Match
		Match	7 days micro-cycle							Match
		Match	6 days micro-cycle						Match	
		Match	5 days micro-cycle					Match		
		Match	4 days micro-cycle				Match			
			Match	3 days micro-cycle			Match			
		Match	2 days micro-cycle		Match					

Source: prepared by the author.

When assigning or distributing working content throughout the week, there is a need to name days differently since Wednesdays on a 9 day micro-cycle are different from Wednesdays on a 3 days micro-cycle.

Naming the remaining days before the following match is widely used. In this sense, if we use the previous table as reference:

Table 2: The following table shows an example of micro-cycles using numbers to name the remaining days before the following match

Friday	Saturday	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Monday
Match	-9	-8	-7	-6	-5	-4	-3	-2	-1	Match
	Match	-8	-7	-6	-5	-4	-3	-2	-1	Match
		Match	-7	-6	-5	-4	-3	-2	-1	Match
		Match	-6	-5	-4	-3	-2	-1	Match	
		Match	-5	-4	-3	-2	-1	Match		
		Match	-4	-3	-2	-1	Match			
			Match	-3	-2	-1	Match			
		Match	-2	-1	Match					

Source: prepared by the author.

As we have seen in the previous example, there are still days that are named in the same way, but that belong to different micro-cycles, for example,

- Number -5 (Wednesday) is the same for 9,8 and 7 days micro-cycles
- Number -2 (Wednesday) is the same for 4 and 3 days micro-cycles

We can solve this problem if we name the days based on:

- The days that have passed since the last competition (+).
- The remaining days for the following competition (-).

Below, days are named according to these criteria:

Table 3: The following table shows an example of micro-cycles naming days based on the days that have passed since the last competition and the remaining days for the following one

Friday	Saturday	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Monday
Match	+1 / -9	+2 / -8	+3 / -7	+4 / -6	+5 / -5	+6 / -4	+7 / -3	+8 / -2	+9 / -1	Match
	Match	+1 / -8	+2 / -7	+3 / -6	+4 / -5	+5 / -4	+6 / -3	+7 / -2	+8 / -1	Match
		Match	+1 / -7	+2 / -6	+3 / -5	+4 / -4	+5 / -3	+6 / -2	+7 / -1	Match
		Match	+1 / -6	+2 / -5	+3 / -4	+4 / -3	+5 / -2	+6 / -1	Match	
		Match	+1 / -5	+2 / -4	+3 / -3	+4 / -2	+5 / -1	Match		
		Match	+1 / -4	+2 / -3	+3 / -2	+4 / -1	Match			
			Match	+1 / -3	+2 / -2	+3 / -1	Match			
		Match	+1 / -2	+2 / -1	Match					

Source: prepared by the author.

In view of the necessity to solve the problem of naming the days according to the micro-cycle, we have shared some formulas. There may be other ways to do it. In this sense, our goal is to increase awareness about the need for it and share examples that can serve as reference or inspiration.

3. How do I distribute the contents within the micro-cycle?

Once I know the opponent's contents that I want to communicate and the structure of our micro-cycle, the following step is to distribute these

contents according to the criteria that are considered most appropriate, that is to say, we will decide when to communicate them. We must program this distribution but, at the same time, it must be open to modifications since circumstances may indicate the suitability or not of following the original plan.

In module 3 of this course we have already talked about including contents in training tasks, therefore, we will have to address other moments to communicate the opponent's information to the player throughout the microcycle. Mainly, we refer to video sessions, graphics, photos, reports, etc that will be shared with the players individually, in group, or collectivelly. The idea of creating three large blocks when preparing these videos or reports is widely used:

- Own analysis video (self-analysis).
- Opponent's analysis video.
- SPA's video (Individual and opponent's set piece actions).

Own analysis video (self-analysis)

This video is usually shown first during the micro-cycle and its contents reflect the behaviors observed in the last match. It is the video that we show players after they analyze their own behaviors in that match (this topic is extensively discussed in the "*Match Analysis*" course)

As we mentioned before, the schedule of the day on which we will show this video depends on the structure of the micro-cycle but, if we assume a standard Sunday-to-Sunday micro-cycle, two options will appear:

- Showing the video on the first training day of the week (Monday or Tuesday):
- I can easily remember the actions performed during the match.
- I can associate the previous match with this training and I close the process with this feedback.

    - In subsequent training we will deal with the next match.
- Showing the video days after the first training day (usually on Wednesday)
    - We give more time for reflection.
    - Generally, during this time, emotions generated after the match will diminish.
    - I can more easily relate contents from the previous match to the following one.

In any case, you will always have to connect to the emotional aspect of the group and of the individual player to decide when to communicate this analysis. In this sense, we need to know that goalkeepers do usually demand the analysis of their individual performance in the previous match as soon as possible. We have to take this into account to provide this information as fast as we can.

Opponent analysis video

This information is usually revealed at the end of the week. Here, we must pay attention to one important factor when deciding what day or days the information will be revealed. This factor is related to the need or not to train different playing actions that we observe based on information about the opponent (operational strategy). If we consider it is appropriate to train them, we have to prepare these videos beforehand to have the opportunity to train these playing actions during training. However, sometimes, they are not trained, either due to lack of time or because it is not considered necessary. According to this fact, we can obtain information about the opponent on different days, even the day of the match.

SPA's video (individual and opponent's set piece actions)

These actions usually appear at the end of the week or micro-cyle; probably because they are trained during the last few days of the week. We must consider that the opponent's behaviors we observe (as a result of their analysis) and the way to counteract them (as a result of our self-analysis) can be combined in the SPA video as well as in their training. This consideration will lead us to elaborate a joint proposal to overcome these types of situations.

We can show each of these videos individually or collectively (group and/or team). This is another factor to take into account when organizing when to show them during the micro-cycle.

Below, there are some examples of how the opponent videos are scheduled in different micro-cycles based on our own experiences. These schedules clearly vary according to different factors:

- **The opponent**. Some opponents require further study and reveal more information to be shared with our players than others. For instance, suppose our next week opponent show a playing style very similar to that of the previous week. Maybe these videos will be less important because we have played with them recently.
- **Competition**. There may be competitions in which I know little about my opponent or other ones in which I know him better. For instance, I

  may not probably know in depth a team that is playing for the first time in UEFA LEAGUE where most of its players are not well known, although nowadays, there are many and varied sources of real-time information.

- **Travels**. In these cases, logistics is very important. If we play in our own stadium we will have much more time because we do not have to move around. However, in long trips everything gets a little more complicated and other moments and even other tools to communicate these contents have to be considered.
- **Available tools**. In principle, we will have more tools when we play in our own stadium than when we play away (exhibition spaces, material, among others)
- **My team's emotional state**. We have to keep in mind how our team is at all times. By this, we refer to the emotional state of players. Sometimes, giving too much information about the opponent can affect a team's self-esteem, especially if they are going through a difficult time.

Table 4: National Team playing Mondays and Tuesday (pre-match preparation from Monday to Tuesday)

Day		Morning	Afternoon
Monday	-4		Video/contents related to our model in previous matches and that will be directly related to the operational strategy (training).
Tuesday	-3	Video/contents related to our defensive organization related to the opponent's attack	Video/contents related to our offensive organization related to the opponent's defense
Wednesday	-2	Introduction of key points related to the opponent (collective or individual strengths and weaknesses).	
Thursday	-1	Own or opponent SPA's video	
Friday	Match	Key points related to the operational strategy of the match.	
Saturday	+1/-3		

Day		Morning	Afternoon
Sunday	+2/-2	Video/Contents related to our defensive organization regarding the opponent's attack	
Monday	+3/-1	Video/Contents related to our offensive organization regarding the opponent's defense	
Tuesday	Match	Own or opponent SPA's video	Key points related to the operational strategy of the match.

Source: prepared by the author

We can see that the pre-match preparation starts on Monday but it will depend on many factors, for instance, if that first pre-match preparation is on Monday (afternoon or morning) or maybe on Tuesday (if players have to travel far or not, most of the national teams have played on Saturdays or Sundays, they had to travel from other distant leagues, etc).

We can see that, when naming the days, we only name the remaining days before the first match (-4,-3,-2,-1) and then we name the remaining days as well as the days since the last match (+1/-3, +2/-2, +3/-1). In the first case, we do not contemplate the days since the last match in the schedule because the casuistry can vary since players come from different teams with different calendars and competitions.

It will be very important to assess the state of each and every player depending on their personal circumstances, to elaborate an appropriate calendar. However, there will be times when the information will have to be communicated to some players differently than others, and thus address this individualization.

Tabla 5: Professional team in competition with midweek match

Day		Morning	Afternoon
Sunday	Match	Own or opponent SPA's video	Key points related to the operational strategy of the match.
Monday	+1/-2	Video/contents from the previous match (successes and errors). They could be related to the operational strategy of the next match.	
Tuesday	+2/-1	Introduction of key points related to the opponent (strengths and weaknesses).	
Wednesday	Match	Own or opponent SPA's video	Key points related to the operational strategy of the match.
Thursday	+1/-3	Video/contents from the previous match (successes and errors). They could be related to the operational strategy of the next match.	
Friday	+2/-2	Key videos and contents that will be directly related to the operational strategy (training).	
Saturday	+3/-1	Introduction of key points related to the opponent (strengths and weaknesses).	
Sunday	Match	Own or opponent SPA's video	Key points related to the operational strategy of the match.

Source: prepared by the author.

The *own or opponent SPA's video* it is scheduled for the mornings of the day of the match, while the video or introduction of the *key points related to the operational strategy of the match* is scheduled for the afternoons (previous the match). However, we can contemplate showing them together if the match is played during the morning.

In this sense, space availability, travels, and even weather conditions may affect the way in which these videos are shown (jointly or

individually). There will be times when we have to assess when to show the video (before or after training, according to rest time, condition, facility availability, among others).

Logically, if we want to train what we observe in the videos, we will have to show them to the players compulsorily **before** that training. For instance, key video/contents that will be directly related to the operational strategy (training).

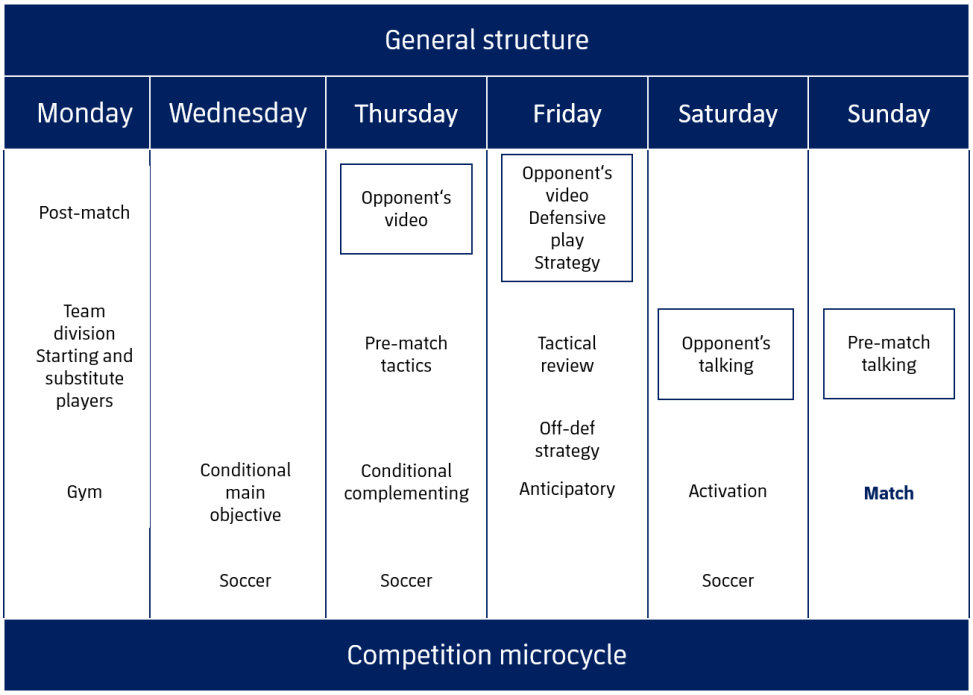

Table 6: Professional team without midweek matches

Day		Morning	Afternoon
Sunday	Match		
Monday	+1/-6	Video/contents from the previous match (successes and errors). They could be related to the operational strategy of the next match.	
Tuesday	+2/-5		
Wednesday	+3/-4	Video/contents related to our defensive organization regarding the opponent's attack	
Thursday	+4/-3	Video/contents related to our offensive organization regarding the opponent's defense	Opponent SPA' video
Friday	+5/-2	Introduction of key points related to the opponent (weaknesses and strengths, individual or collective)	
Saturday	+6/-1	Own SPA's video	
Sunday	Match	Key points related to the operational strategy of the match	

Source: prepared by the author.

We also want to share some examples of other authors about the general weekly structure. There, you can appreciate the moments in which we deal with the information about the opponent that we have to communicate to our players.

Figure 1: Example of general weekly structure

Source: Anquela, 2012, p. 6.

4.2 Communication tools

In the previous unit we have dealt with three questions that arise when communicating the opponent's contents during the micro-cycle:

1. Which contents do we want to communicate?
2. Which type of micro-cycle or weekly structure am I standing in?
3. How do I distribute the content within the micro-cycle?

After this, a fourth question arises and we will deal with it below:

4. What communication tools do I have?

As we have seen in the previous module, the training task must be the main tool to introduce the operational strategy contents, but in most cases, it must be reinforced and/or replaced by others:

Talks

They usually take place before training to explain the contents that we need to work with and the goals we need to achieve. These moments can be used to share aspects about the opponent that are linked to the contents and objectives mentioned above.

Figure 2: Ernesto Valverde explains the contents to work with and the objectives to be reached

Source: Ruiz, 2019a. Own file, unpublished.

Conversations

These conversations will be private and informal since they are probably not planned because they arise according to the issues that may appear during training or micro-cycle.

We might have planned a conversation about some specific aspect of the opponent but we have to choose the appropriate moment to do it so. If we do it at the right time, it will be meaningful and players will understand it easily. We do not only have to find the right moment for a technical-tactical reason (when this situation takes place in training) but also for emotional reasons (there are many personal and social factors that condition the suitability for doing so).

Therefore, we could say that we must assess the technical-tactical and psychosocial aspects when deciding when to have these conversations. These two aspects may permeate all the tools we have available, but we

believe that, due to its variability and spontaneity, we have to pay more attention to them during conversations with players.

Figure 3: Individual conversation

Source: Ruiz, 2019b. Own file, unpublished.

Presentations

Nowadays, it is easy to make a presentation to visually explain aspects of the opponent. To do this, we have tools such as PowerPoint, Keynote, Google Slides, Prezi, among others.

Below, some images of a presentation (PowerPoint, Keynote) during the FIFA Confederation Cup held in Brazil in 2013 are illustrated. Specifically, it is a presentation on a SPA carried out by the National Team of Italy.

Figure 4: Offensive SPA. In-swinging corner

Explanation

Kicker= 21. Pirlo (on the right)-6. Candreva in-swinging corner towards SHORT CORNERS or penalty areas.
Clearance = 22. Giaccherini.
Finishers = 3. Chiellini, 15. Barzagli or 19. Bonucci, 16. de Rossi or 7. Aquilani, 18. Montolivo, 8. Marchisio. If 11 plays, he will be an important reference point as a finisher.
Defenders = 5. de Sciglio + 2. Maggio.
Action: 1 players (18. Montolivo) drags his opponent away from short corner areas, 3 players (16. de Rossi, 3. Chiellini, 15. Barzagli or 19. Bonucci) appear behind to occupy the SPACE created, and 5th player positions further away for a possible continuation of play.

Source: Martín and Peña, 2013. Own file, unpublished.

Figure 5: Offensive SPA. Out-swinging corner

Figure 7: Offensive SPA. Short corner

Source: Martín and Peña, 2013. Own file, unpublished.

Figure 8: Defensive SPA. Corner

Source: Martín and Peña, 2013. Own file, unpublished.

Figure 9: Defensive SPA. Corner 2

Source: Martín and Peña, 2013. Own file, unpublished.

Figure 10: Defensive SPA. Near free kick

Source: Martín and Peña, 2013. Own file, unpublished.

In this last figure (11) we can see a detailed summary of these set piece actions (SPA) emphasizing strengths (highlighted in blue) and possible weaknesses (highlighted in red).

Figure 11: Set piece actions summary

OFFENSIVE SPA
CORNERS:
Kicker = 21. PIRLO (right). 6. CANDREVA outswinging corner towards SHORT CORNERS or PENALTY AREAS. **Clearance**= 22 GIACCHERINI. **Finishers =** 3. CHIELLINI, 15, BARZAGLI or 19. BONUCCI, 16. DE ROSSI or 7. AQUILÁNI, 18. MONTOLIVO, 8. MARCHISIO. If 11. GILARDINO plays, he will be an important reference point as a finisher. **Defenders =** 5. DE SCIGLIO + 2. MAGGIO. In-swinging corner: 1 player (18. MONTOLIVO) drags his opponents away from short corner areas, 3 players appear (16. DE ROSSI, 3. CHIELLINI, 15. BARZAGLI or 19. BONUCCI) behind to occupy the SPACE created, and a 5th player (8. MARCHISIO) positions further away for a possible continuation of play. Dangerous shootings to SHORT CORNER areas. Out-swinging corner: 1 player (18. MONTOLIVO) drags his opponent away from short corner areas, 3 players (3. CHIELLINI, 15. BARZAGLI or 19. BONUCCI, 16. DE ROSSI) appear behind to occupy the SPACE created, and a 5th player (8. MARCHISIO) positions further away for a possible continuation of play.
LATERAL FREE KICKS:
Kicker = 21. PIRLO (Right)-6. CANDREVA out-swinging corner or 23. DIAMANTI (left) in-swinging corner towards SHORT corners or PENALTY AREAS. **Clearance** = 22. GIACCHERINI **Finishers =** 3 CHIELLINI, 15. BARZAGLI or 19. BONUCCI, 16. DE ROSSI or 7. AQUILANI, 18. MONTOLIVO, 8. MARCHISIO. If 11 plays. GILARDINO, he will be an important reference point as a FINISHER. **Defenders =** 5. DE SCIGLIO + 2. MAGGIO **Action 1:** 1 player (18. Montolivo) drags his opponent away from short corner areas and behind, in line from distant zones, 4 players appear (16. DE ROSSI, 3. CHIELLINI, 15. BARZAGLI or 19. BONUCCI, 8. MARCHISIO). 16. DE ROSSI makes a circular movement from distant situations towards SHORT corner areas looking for 16. DE ROSSI and 2 center backs that come from the penalty area. **Action 2:** 3 players move back and forth to create space 2 players block 16. DE ROSSI and he makes a circular movement from distant situations towards backward positions, they try to do it with 9. BALOTELLI and from the opposite side with 16. DE ROSSI, it can be a low ball to finish it with foot or an aerial ball to finish it with head.
NEAR FREE KICKS:
Kicker = 21. PIRLO (right) or 16 DE ROSSI with a high quality kicking towards the goal post. **Clearance** = 22 GIACCHERINI. **Finishers =** 3. CHIELLINI, 15. BARZAGLI or 19. BONUCCI, 16. DE ROSSI or 7 AQUILANI, 18, MONTOLIVO, 8. MARCHISIO. If 11. GILARDINO plays, he will be an important reference point as a FINISHER. THEY SEND 2 PLAYERS TO THE WALL TO LIMIT THE GOALKEEPER'S VISION. **Defenders =** 5. DE SCIGLIO + 2. MAGGIO **Action:** Usually, there are 1-2 players and they finish the action shooting directly towards the goal, and goalkeeper's post. 21. PIRLO opted to create a free kick aiming to kick the ball under the wall when the players jumped trying to block the shooting over them. A team with very good aerial play and good kickers. • **They have successfully completed many actions, 2 goals and 2 crossbar shots.** • **Great kicker 21. PIRLO and great FINISHERS (3. CHIELLINI, 15. BARZAGLI or BONUCCI, 16. DE ROSSI)** • **PROBLEMS during the defensive transition if they do not finish the offensive SPA.**
DEFENSIVE SPA

CORNERS:
Post = 21. PIRLO. **Short corner area** = 18. MONTOLIVO. **Markers** = 3. CHIELLINI, 15. BARZAGLIA or 19. BONUCCI, 2. MAGGIO, 5. DE SCIGLIO, 16. DE ROSSI or 7. AQUILANI. **Clearances:** 22. GIACCHERINI + 8. MARCHISIO. **Reference:** 11. GILARDINO or 10. GIOVINCO or 22. GIACCHERINI.
KICKS:
ZONE = 1°- 18. MONTOLIVO or 7. AQUILANI, 2°- 16.DE ROSSI, 3°-2. MAGGIO, 4°-15. BARZAGLI or 19. BONUCCI, 5°-3. CHIELLINI, 6°-5. DE SCIGLIO. **Clearances:** 21. PIRLO. **Wall:** 1-2 players 8. MARCHISIO + 22. GIACCHERINI. **Reference:** 11. GILARDINO or 10. GIOVINCO or 22. GIACCHERINI. Being such a powerful team in air play, they show some weakness in these types of actions lack of organization, attention and coordination. • **They gave many FINISHING options to both JAPAN and Brazil.**

Source: Martín and Peña, 2013. Own file, unpublished.

These presentations are usually combined with very significant videos that help players to clearly identify what the coaching staff wants to communicate.

Thus, we think it is very interesting to share videos that show our own team's behaviors that we want to repeat in the following match. If we do this, we will reinforce the sense of confidence, trust and determination of the players since they do something they have already done in the past and therefore, it is within their reach.

We want you to take a look to the following example of a tactical analysis' presentation of Juventus 2019-20 (Available in this link http://el9ymedio.com/2019/09/27/video-analisis-analisis-tactico-de-la-juventus/). There, we can also find videos showing this team's behaviors during the cycle of play:

- Organized attack.
- Attacking-defending transition.
- Organized defense.
- Defending-attacking transition.
- Attacking SPA.
- Defending SPA.

- Among others.

Internal documents

Current technology allows us to use tools such as:

- Data storage platforms (Dropbox, iCloud, Google Drive, Mircrosoft OneDrive, pCloud, Amazon Drive, Mega, Box, etc.).
- Platforms for the transmission of messages, data, files (WhatsApp, Telegram, Wetransfer, MyAirBridge, SlideShare [comparte presentaciones], Xender, Send Anywhere, MediaFire, etc.).
- E-mails (Gmail, Outllook, Yahoo, iCloud Mail, etc.).
- Among others.

In the following *tweet* we can read how Clément Lenglet (from FCB 2019) carries out the individual analysis of certain aspects of the next opponent based on a production prepared by the club (probably prepared by an analyst).

Figure 12: Clément Lenglet individual analysis

Source: Lenglet [@futbolxvenas], 2019, https://twitter.com/futbolxvenas/status/1122799398528978944

All these tools help us to share, in an immediate and easy way, information about the opponent that we consider important. Moreover, they allow us to customize information based on the audience.

These formats evolve with increasing speed. New tools, concepts, ways of working and cooperating appear. That is why we must try to be up-to-date at all times. This update will allow us to vary our procedures, help us not to fall into monotony and make our message more attractive. Consequently, it will raise the level of attention and understanding of it. If the message is too predictable, it can affect the transmission of it.
These tools (talks, conversations, presentations, internal documents, etc) used to communicate players about the opponent's behavior, must follow a **transmission strategy or plan**.

We will describe several factors that are closely related to this transmission strategy.

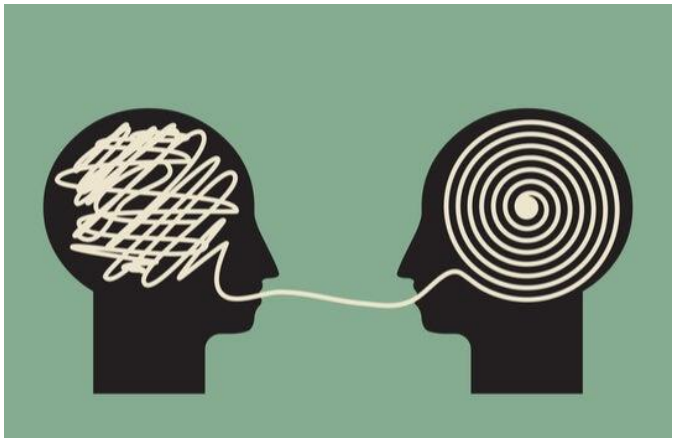

Audience

It can be directed to one or many players, that is to say, the message can be communicated individually, in group or to the whole team.

In this sense, we have to be very careful in the way we communicate with the players. It is important to empathize with the player so as not to assume that he understands our message. Sometimes, the player says that he understands perfectly what we are saying but then he does not demonstrate this when he plays. In most cases, the problem arises when the player says he understands because he respects the coach or coaching staff and to show he does not doubt about our information. Comparing that the information has been understood as we want it to can be a good strategy to avoid confusions.

We recommend you to read this small example, and also to do research and prepare yourselves for the new communication tools.
Example: *El cuento de la sopa y los problemas de comunicación* (The Soup Story and Communication Problems) Available in https://lamenteesmaravillosa.com/el-cuento-de-la-sopa-y-los-problemas-de-comunicacion/)

Figure 13: El cuento de la sopa y los problemas de comunicación de Jorge Bucay (The Soup Story and Communication Problems by Jorge Bucay)

Source: [Untitled image of communication]. (2013). Retrieved from https://lamenteesmaravillosa.com/el-cuento-de-la-sopa-y-los-problemas-de-comunicacion/

Nature of the content

These contents will vary from very specific details to more general aspects. Next, we can see a proposal of co-responsibility between both factors:

Figure 14: Proposal of co-responsibility from very specific details to more general aspects

Recipient	Opponent's content
Individual	Very specific aspects. (Usually about that player's interaction with the opponent).
Group	Collaborative aspects and with an immediate link. Lines and/or corridors (defenders, midfielders, lateral+external forward, goalkeeper+center backs, among others). Specific positions (center backs, forwards, etc.).
Team	General aspects. (Normally related to the cycle of the play and SPA).

Source: prepared by the author.

Message coordination

It is very important that the coaching staff communicate this information in a unique and coordinated way. We cannot contradict ourselves when communicating this. That is why we must agree on it beforehand. The credibility of both, the message and the communicator may be at stake.

Moreover, it is important to decide who will communicate the message. This is something we need to consider when coordinating this process. In most cases, socio-affective structures should help us to come to a decision. The type of relationship, rank, friendship, sensitivity, among others, will allow us to communicate our message better (and also receive it).
